Django Todo App Requirements

Overview

Develop a To-Do Application using Django, allowing users to manage their tasks efficiently with authentication and filtering features.

Requirements:

Task Management

- Users can add new tasks with details such as title, description, due date, due time.

Task Viewing & Filtering

- Users can view all tasks, including both completed and remaining tasks.
- Users can filter tasks by status:
    - Completed Tasks
    - Pending/Remaining Tasks

Task Details

- Users can view individual task details, including title, description, status, and due date.

Task Deletion

- Users can delete tasks.

User Authentication & Authorization

- User Registration: New users can sign up.
- Login/Logout functionality.

User-Specific Data & Restrictions

- Only authenticated users can see & access their tasks.
- Task Search & Filtering
- Users can search for tasks using keywords (e.g., by title or description).
